

Peer Evaluation Form for Group Work

Your name: Dylan Smith

If you worked by yourself, only answer Question 3 on Page 2.

Ratings

Write the name of each of your group members in a separate column. For each person (including yourself), indicate the extent to which you agree with the statement on the left, using a scale of 1-4 (1=strongly disagree; 2=disagree; 3=agree; 4=strongly agree). Total the numbers in each column.

Evaluation Criteria	Group member:	Group member:	Group member:
Attends group meetings regularly and arrives on time.			
Contributes meaningfully to group discussions.			
Completes group assignments on time.			
Prepares work in a quality manner.			
Demonstrates a cooperative and supportive attitude.			
Contributes significantly to the success of the project.			
TOTALS			

Feedback on team dynamics and the project:

1. How effectively did your group work?

2. Were the behaviors of any of your team members particularly valuable or detrimental to the team? Explain.

3. What did you like most about this project? What did you dislike most about this project?

The part of the project that I liked the most was figuring out how to best present a model's summary statistics cleanly using the `kable()` function. In the past, I have only had to use the `summary()` function, but just including the output of the `summary()` function doesn't look professional when writing this kind of report. I thought this aspect of the project presented a new and unique challenge for me and is definitely a skill that I think will help me in the future. The part of the project that I disliked the most is all of the Latex and R Markdown formatting problems that I had to resolve to make the report look professional. I spent more time on making sure things were spaced out properly with the right amount of newline characters than I would have liked. I didn't have a lot of prior experience using Latex's math mode as well, and figuring out how to format subscripts and exponents was initially a bit frustrating.
